Cloud Migration

As a *CTO*, I want *the application moved from out local data center into the cloud and architected to ensure redundancy across multiple zones* so that *the system is more robust in the event of a failure of computing infrastructure.*.

Story Points: 6

Customer Value: 60

Common Platform

As a *CTO*, I want *the application to use a common code base for both iOS and Android Deployments* so that *the developers do not need to maintain two separate applications, one for Android and one for iOS.*.

Story Points: 8

Customer Value: 50

User Relationships

As a *User*, I want *the application to support multiple users to safely access a single account and perform operations on a single account* so that *spouses can jointly manage transactions and a parent can aid a child using money zoom while away at college*.

Story Points: 6

Customer Value: 60

Currency Conversion

As a *User*, I want *the application to support transfers made in a foreign currency and converted to American Dollars* so that *the user can use the application while vacationing in Canada, Mexico, and the Bahamas.*.

Story Points: 8

Customer Value: 50

Transaction Categorization and Budgeting

As a *User*, I want *my transactions to be automatically categorized and allow me to set budgets* so that *so that I can track and control my expenses*.

Story Points: 6

Customer Value: 40

In-App Chat for Transfers

As a *User*, I want *to include a message with my transfer and be able to chat with the recipient* so that .

Story Points: 6

Customer Value: 40

Scheduled Payments

As a *user*, I want *to schedule recurring payments* so that *I don't have to remember and manually pay them each time*.

Story Points: 4

Customer Value: 40

Digital Receipts for Bill Payments

As a *user*, I want *to receive digital receipts for each payment* so that *I have proof of payment for my records or tax purposes*.

Story Points: 3

Customer Value: 50

BuildOps:
